

Azhad Shahzad Shaik

shaikazhadshahzad@gmail.com

Professional Summary

- Cybersecurity and data analytics professional with a strong engineering foundation and progressive experience across telecom networking, software engineering, IT risk analysis, short-term cybersecurity engineering engagements, and ongoing data analytics work.
- Built early technical expertise through hands-on roles in control systems engineering and Android application development, establishing a solid base in system logic, troubleshooting, and applied engineering concepts.
- Developed large-scale infrastructure experience at Vodafone Idea Ltd. by supporting RAN operations, network migrations, and nationwide 4G modernization initiatives in live production environments.
- Strengthened secure software and compliance exposure at Sprinto Technology by contributing to backend development, debugging, and security-focused SaaS platform enhancements.
- Transitioned into formal cybersecurity roles through a 350-hour IT Risk Analyst internship, applying the NIST Cybersecurity Framework to real-world threat analysis, risk assessment, and governance scenarios.
- Gained applied cybersecurity engineering experience at Infosysnow Inc. by supporting security protocols, vulnerability assessments, threat monitoring, and security-by-design practices across enterprise systems.
- Currently working as a Junior Data Analyst at Solstice Solutions, applying analytical concepts to real-world datasets while supporting data preparation, validation, documentation, and reporting activities under structured mentorship.
- Experienced in collaborating with cross-functional teams to translate technical and business requirements into actionable security, analytics, and operational tasks across diverse environments.
- Demonstrated research capability through peer-reviewed publications addressing Denial-of-Service threats in IoT-enabled Electric Vehicle Charging Stations and healthcare monitoring systems.
- Holds a Master's degree in Cyber/Computer Forensics and Counterterrorism, integrating cybersecurity, data analysis, networking, and engineering expertise into a cohesive professional profile.

Skills

Cybersecurity: NIST CSF, Risk Assessment, Threat Modeling, Vulnerability Analysis, NICE Framework

Networking: TCP/IP, DNS, DHCP, RAN, OSS, Wireshark

Security Tools: Nmap, McAfee, Windows Defender

Systems & Scripting: Linux, Bash, PowerShell, Python

Cloud Platforms: AWS, Microsoft Azure

Certifications

CompTIA Security+ (SY0-701) — CompTIA

Valid through Oct 2028

Credential ID: COMP001022881385

AWS Fundamentals — Amazon Web Services

Python (HackerRank, Coursera)

Experience

Solstice Solutions, Inc. — Jr. Data Analyst

Oct 2025 – Present

Hartford, CT

- Work as a Junior Data Analyst supporting HL7 to FHIR data integration initiatives to ensure accurate, secure, and compliant deployment of healthcare data systems across clinical environments.
- Assist in data extraction, validation, and transformation processes to map HL7 messages into FHIR resources, supporting interoperability and standardized healthcare data exchange.
- Support analysis and verification of healthcare datasets to ensure data quality, structural consistency, and alignment with FHIR specifications prior to deployment.
- Collaborate with technical and healthcare stakeholders to document data mappings, integration workflows, and validation results supporting production readiness.
- Contribute to healthcare data deployment assurance by supporting testing, documentation, and ongoing monitoring of HL7–FHIR integration pipelines.

Infosysnow Inc. — Cyber Security Engineer

Aug 2025 – Oct 2025

Remote

- Created and updated security protocols and procedures to safeguard sensitive information against unauthorized access and reduce risk of security incidents and data exposure.
- Monitored network traffic for anomalies and suspicious activity, supporting incident investigation and corrective actions to strengthen detection and response readiness.
- Conducted vulnerability assessments and supported penetration testing activities to identify weaknesses, document findings, and recommend remediation strategies for risk reduction.

- Partnered with IT and software development teams to embed security measures into system architecture, supporting security-by-design across implementation and deployment workflows.
- Researched emerging threats and security trends, using threat intelligence inputs to improve security strategy, awareness, and defensive posture across environments.

iQ4 — IT Risk Analyst Intern

May 2024 – Aug 2024

Remote

- Completed a 350-hour cybersecurity engagement focused on enterprise risk and threat analysis by evaluating organizational security posture across governance, technical controls, and operational processes.
- Applied the NIST Cybersecurity Framework to assess current-state security maturity, identify control gaps, and map findings to risk categories impacting confidentiality, integrity, and availability.
- Analyzed real-world cybersecurity incidents across people, process, and technology domains to understand attack vectors, threat actors, and systemic weaknesses affecting organizational resilience.
- Mapped security responsibilities to NICE cybersecurity workforce roles to align detection, response, and mitigation activities with standardized industry role definitions.
- Produced structured risk findings and mitigation recommendations that aligned technical vulnerabilities with business impact and enterprise risk management objectives.

Sprinto Technology Private Limited — Associate Software Engineer

Apr 2023 – Dec 2023

India

- Worked as an Associate Software Engineer supporting security and compliance-focused SaaS platforms by assisting in backend feature development, issue resolution, and system enhancements.
- Contributed to implementation and maintenance of application logic by collaborating with cross-functional teams to support product reliability, scalability, and secure functionality.
- Assisted in debugging, testing, and validating software components to ensure stable releases and adherence to internal quality and security standards.
- Supported integration of security-related workflows and controls aligned with compliance requirements, strengthening understanding of secure software development practices.
- Collaborated with senior engineers and product teams to analyze requirements, implement fixes, and improve overall platform performance and user experience.

Vodafone Idea Ltd. — Graduate Engineering Trainee → Network Engineer (Operations)

Nov 2021 – Apr 2023

Hyderabad, India

- Progressed from Graduate Engineering Trainee to Network Engineer within Vodafone Idea's operations organization, supporting large-scale telecom network deployment and live production environments.
- Supported RAN operations by configuring, migrating, and validating 2G, 3G, and 4G cell sites using OSS scripting and XML automation tools across multiple regional clusters.
- Provided second-level operational support by troubleshooting BSC-level faults, analyzing performance metrics, and restoring services in high-availability network environments.
- Led and supported OSS to SRAN migration activities for 3500+ sites, ensuring configuration integrity, minimal service disruption, and smooth regional cutovers.
- Contributed to nationwide 4G upgrade initiatives across 15 states by coordinating rollout readiness, validating configurations, and supporting post-deployment stabilization efforts.

SanRidge Pvt. Ltd. — Intern, Android Development

Dec 2020 – May 2021

Hyderabad, India

- Developed Android applications using Kotlin and Android Studio by implementing application logic, UI components, and core functionality across multiple small-scale projects.
- Implemented application workflows and XML-based user interfaces to support responsive layouts and consistent user experience across different screen sizes.
- Designed user interfaces following Material Design principles to enhance usability, visual consistency, and interaction flow within mobile applications.
- Tested applications across multiple devices to validate functionality, performance, and stability prior to release and demonstration.
- Gained end-to-end exposure to the mobile application development lifecycle including design, development, testing, debugging, and iteration.

Swaraj India Agro Ltd. — Intern, Control Systems Engineering

May 2019 – Jul 2019

Maharashtra, India

- Supported automation and control systems used in large industrial machinery by assisting engineers in monitoring system behavior and operational stability.
- Assisted in monitoring temperature, pressure, and other operational parameters to ensure safe and efficient machinery performance during production cycles.
- Observed PLC-based control workflows to understand industrial control logic, signal flow, and system response mechanisms.

- Supported validation of control logic and system stability through observation, data recording, and coordination with senior engineers.
- Gained practical exposure to industrial safety standards, instrumentation basics, and process optimization within manufacturing environments.

Organizations

Management Conference 2022

Apr 2022 – Apr 2023

Associated with **Vodafone Idea Ltd.**

- Participated in organizational planning and coordination of leadership development events.
- Supported operational logistics and stakeholder coordination.
- Collaborated with cross-functional teams to ensure smooth execution.

Education

Sacred Heart University — M.S. in Cyber/Computer Forensics and Counterterrorism

Mar 2025

Fairfield, Connecticut, United States of America

Koneru Lakshmaiah College of Engineering — B.Tech in Electronics and Communications Engineering *May 2021*

Guntur, Andhra Pradesh, India

Publications

A. S. Shaik, M. Gutla, A. P. R. Kagitala, and S. Bhatia, “**Plugged-in and Protected: Leveraging Machine Learning to Secure IoT-Based Electric Vehicle Charging Stations from Denial-of-Service Threats,**” *IEEE Global Conference on Artificial Intelligence and Internet of Things (GCAIoT)*, 2025.

A. Kanakamalla, A. S. Shaik, and S. Suman, “**Remote Monitoring System of Heart Conditions for Elderly Persons with ECG Machine Using IoT Platform,**” *Journal of Intelligent Systems and Technologies (JIST)*, vol. 10, no. 37, 2023.
